**Alessandro Siragusa**

**External Thermal Insulation  
Composite System** brings  
considerable  
advantages in terms of  
**environmental sustainability**,  
because it improves the  
**energy efficiency** of the buildings.

This means it allows the achievement of an ideal indoor climate through a **reduced recourse to warming** and air conditioning systems, this way **cutting off the fuel and electricity consumption** necessary for the heating in winter and the **air conditioning** in summer.

Regardless of the building nature, residential or industrial, this energy saving translates into a **minor impact on the environment** and **minor exploitation of the planet resources**, as well as representing a **significant economic benefit** for those who live in or have to manage a building.

Like a warm and sincere hug,  
a **Quality External Thermal  
Insulation Composite System**  
surrounds you with **well-being**.

A good **External Thermal Insulation System**,  
realised in accordance with best practice,  
allows you to create **a healthy and cosy environment**.

**CORTEXA®**  
Consorzio per la cultura del sistema a cappotto

A place where you are glad to **stay**.

A **healthy and comfortable place**  
to bring up your children.

A different way, real and effective,  
**to take care of your family.**

Just like an item of clothing, **Thermal Insulation Coating** also pursues the **aesthetic sense**.  
There are a number of **solutions and finishes** that make a building a **work of art**.

**Thermal Insulation Coating**  
pursues also an **aesthetic sense**.

So that the **indoor well-being**  
can be perceived by all sensory organs.

And that's where **shapes games** and **chromatic variations** come to life!  
**Fantasy confidently spreads**  
in pursuit of sober geometries or more curvy structures.

Colours become more  
**powerful and vigorous**  
underlining the structure **details.**

Or they **gently** accompany  
the sequence of elements  
with more **discreet**  
**and controlled nuances.**

All of this without losing sight of the  
**Quality of the final building.**

**ETICS** increase **living comfort** and  
value of buildings.

## Examples from across Europe: **France**

## Examples from across Europe: **Germany**

## Examples from across Europe: **Austria**

## Examples from across Europe: **Netherlands**

## Examples from across Europe: **Romania**

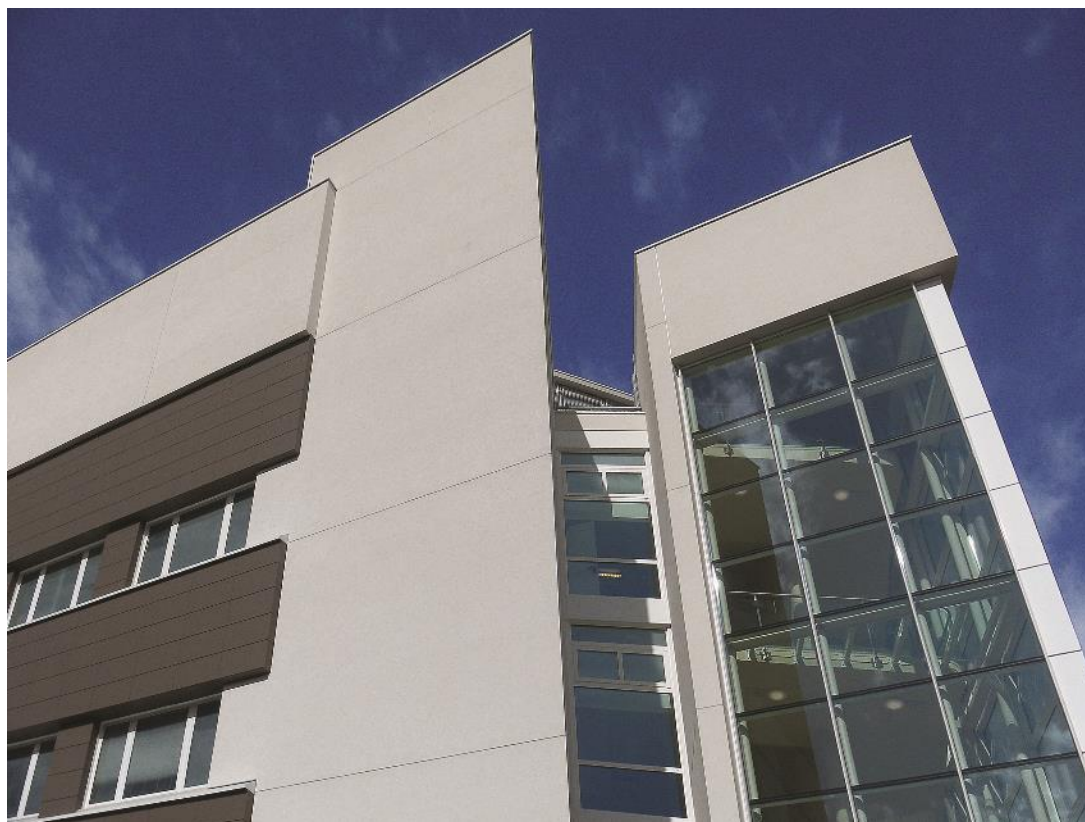

## Examples from across Europe: **Italy**

**External Thermal Insulation Composite System** offers  
energy efficiency and aesthetic sense without compromises:  
**healthiness, energy saving, comfort and beauty!**

**Thank you for your attention.**

Cortexa Consortium has been promoting  
the culture of the  
**Quality External  
Thermal Insulation System  
for over 10 years.**
