European Guideline for the Application of ETICS

European Guideline for the Application of ETICS

The four pillars for the success of ETICS are:

- 1. The quality of the planning
- 2. The quality of the **products**
- 3. The quality of application
- 4. The importance of the **system concept**

The **Application Guideline** brings these four aspects together in order to create a reference (in terms of quality to be achieved) for all who are responsible of the construction work: e.g. planners, architects, tradesmen carrying out the work, investors, builders, developers.

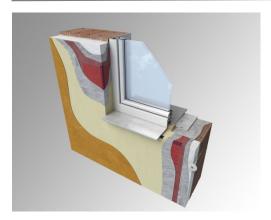

The **Italian version** of the Guideline published by Cortexa adopts entirely the European Guideline and adds references to the specific norms and laws, technical and application aspects of the Italian market.

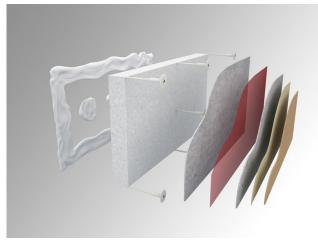

Examples of Cortexa Technical Communication

Cortexa Contribution to Quality and Market Growth

- Quality control and certification
- Management and monitoring of the complete process
- Continuous training for the installers, by means of installation courses in accordance with the EAE guide
- Lobbying with reference to resources and public financing
- Promotion and communication

Cortexa Advertising Campaign 2014 - 2015

Thank You for Your Attention
