Annex I

I would like to express my concern about all the provisions for FPC but these for anchors. Considering the example of shear strength in table E.4. I wonder whether it is clear to the industry and production responsible persons that the +/-20%-range for shear strength referring to the reference value, will be narrowed over time. Whenever a new anchor concept is qualified by the “pull-off tensile shear resistance test” there is a chance that actual relative FPC range becomes smaller.

					prEN17237 table E.4		actual FPC range			
					actual shear strength [kPa]	FPC 20% [kPa]	- FPC +20% [kPa]	actual FPC min [kPa]	actual FPC max [kPa]	actual relative FPC range [+/- %]
01.01.2024	HILTI	spiral anchor	Pull-off resistance	tensile-shear	18.8	15.04	22.56	15.04	22.56	20%
01.02.2024	Fischer	spiral anchor	Pull-off resistance	tensile-shear	16.9	13.52	20.28	15.04	20.28	15%
01.03.2024	EJOT	countersunk anchor	Pull-off resistance	tensile-shear	19.7	15.76	23.64	15.76	20.28	13%
01.04.2024	Fischer	countersunk anchor	Pull-off resistance	tensile-shear	17.2	13.76	20.64	15.76	20.28	13%
